THE judicious home builder demands a roofing material which fulfills his desire for a truly beautiful house-top, yet gives adequate protection against the ruthless elements and reduces fire hazard. Economy will be in his mind, too, so he will look for a roof which will last as long as the house itself.

Answers to these several roofing problems will be found in Ambler Asbestos Shingles. The desire for beauty is met by the excellent selection of color and texture procurable in this material. A roughness in the surface of the shingle and greater thickness at butt than at top gives a rugged effect when architectural type calls for it. Where further unevenness is desired, irregular butt lines are possible, either by the roofer breaking butts, on the job, or shingles can be obtained in this condition from the manufacturer.

Color, which has swept so freely into kitchen and bathroom during the past few years, has also made a conquest of house exteriors. A wide range of colors in Ambler Asbestos Shingles makes it possible for the home owner to have a colorful roof which will complete his house in a tone conforming with its architectural design and color scheme. Brown, red, green, buff, purple, and pearl gray may be used in various combinations or in solid colors. The permanency of these colors is insured by pure metallic oxide mixtures which are not affected by climatic conditions. Color is an integral part of the shingle, not an after-thought or a mere coating.

Fire-safety is so important a factor in the home that the roof should be chosen with this element particularly in mind. Many fires result from sparks from the chimney catching to the tinder-dry, inflammable roof. Ambler Asbestos Shingles cannot burn and will protect your property and lower your insurance costs.

Ambler Asbestos Shingles are made in two general styles, uniform thick and tapered. In this book we present varying types of homes, from cottages to mansions, each with a roof suited to style of architecture and capacity of pocketbook. We have never known an Ambler Asbestos Shingle roof to wear out. It will last you a lifetime with a minimum of cost and a maximum of protection, and it will look well all those years.

Here is a roof of which any home-owner may well be proud—Tapered "English Thatch" Ambler Asbestos Shingles, with random widths laid in irregular courses

Amid the pines near the Jersey seacoast stands this physician's delightful home, roofed with Pearl Gray
"English Thatch." Salt air cannot harm Ambler Asbestos Shingles

On the shores of a fir-fringed Maine lake is the summer residence of Mrs. F. M. Woolworth, roofed with "English Whatch" in mixed colors of Brown, Red, Purple and Pearl Gray

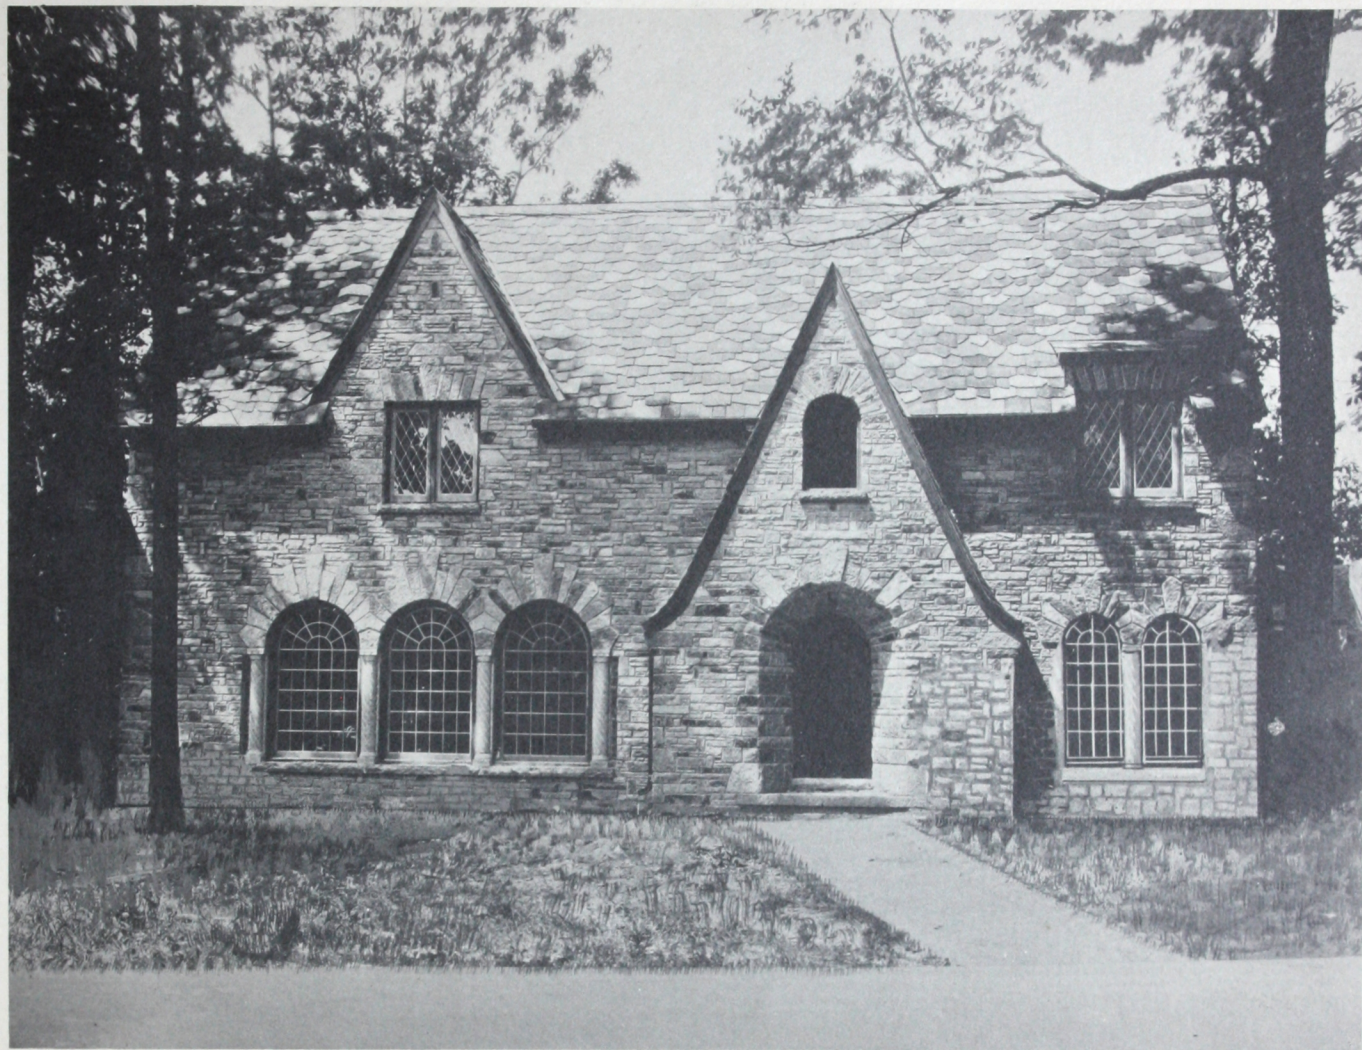

Above is a popular type of substantial suburban home, roofed with Brown Tapered Colonial in random widths. Insurance rates are lower with Ambler Asbestos Shingles

For that country home where protection from fire and the elements is important, we recommend Ambler Asbestos Shingles. Those pictured above are "English Chair," $\frac{1}{2}$ -inch thick at the butt

Here is a well-built home in Delaware, Ohio, with brick, stone, steel casements and "English Thatch"
Ambler Asbestos Shingles—all lasting materials

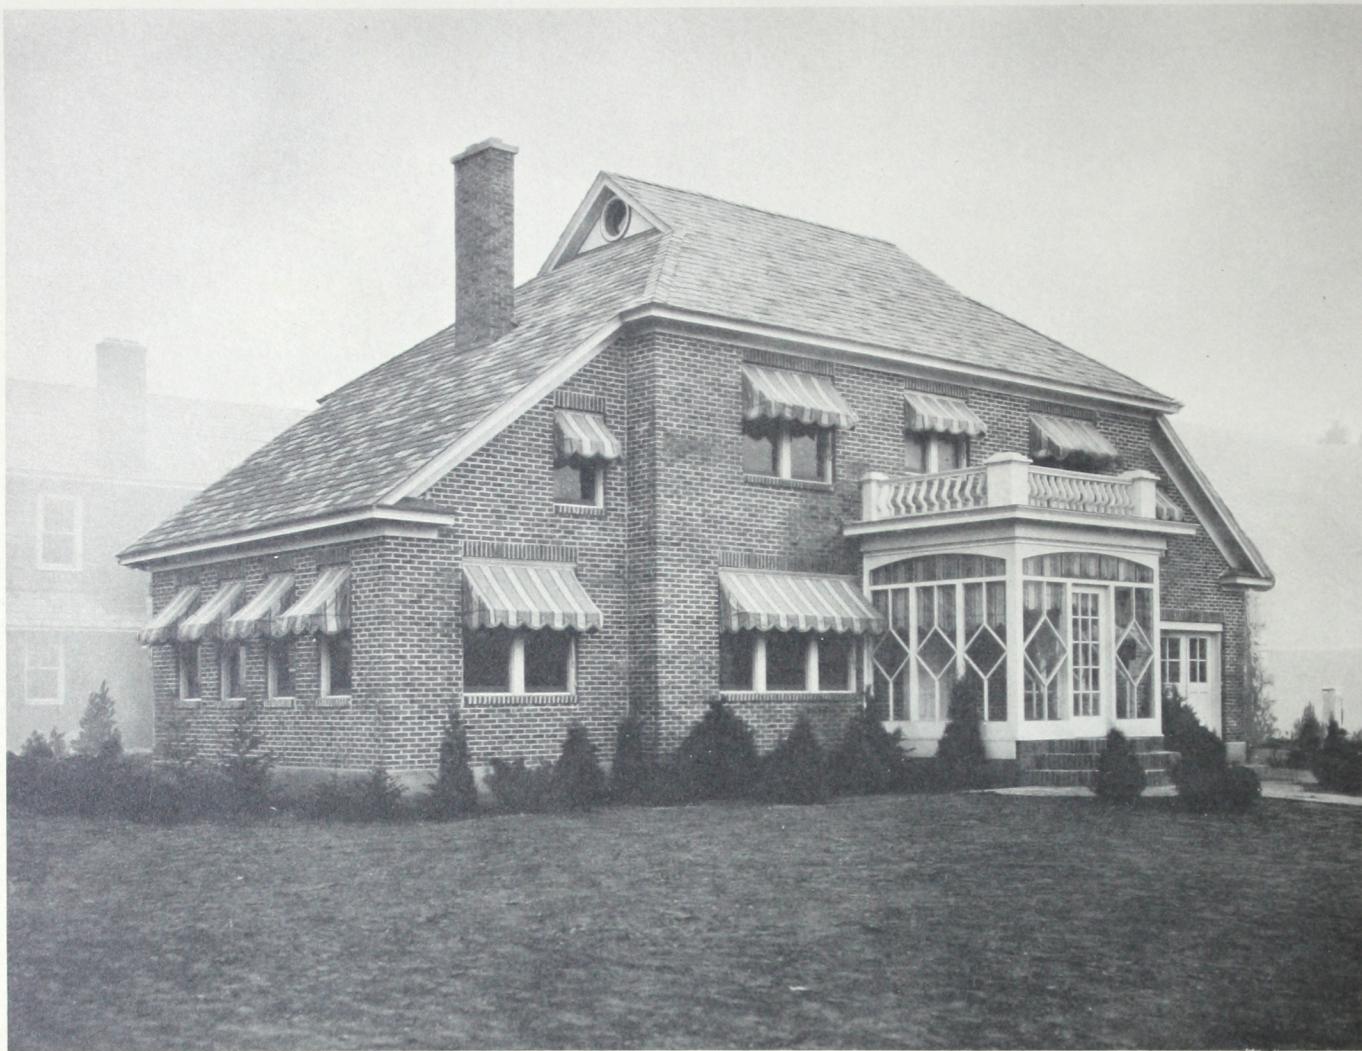

LeRoy Kunzelmann, of Milwaukee, writes us concerning his home shown above: "I know of no nicer or better roof than one composed of your shingles." This is "English Whatch" with broken butts

An example of a smaller home in a Middle Western City, protected by Green "English Thatch"—an excellent architectural companion to brick walls

Another moderate-priced house covered with Green "English Hatch" Ambler Asbestos Shingles. Lasting walls and, above all, a good roof

This is a Model Home erected in Albany a few years ago. The architect selected "English Tenth" Ambler Asbestos Shingles, a combination of Pearl Gray, Green, Red and Brown

An increasingly popular occupation—remodeling Early American farmhouses. Here is an excellent example roofed with Green "English Hatch" Asbestos Shingles laid in straight courses

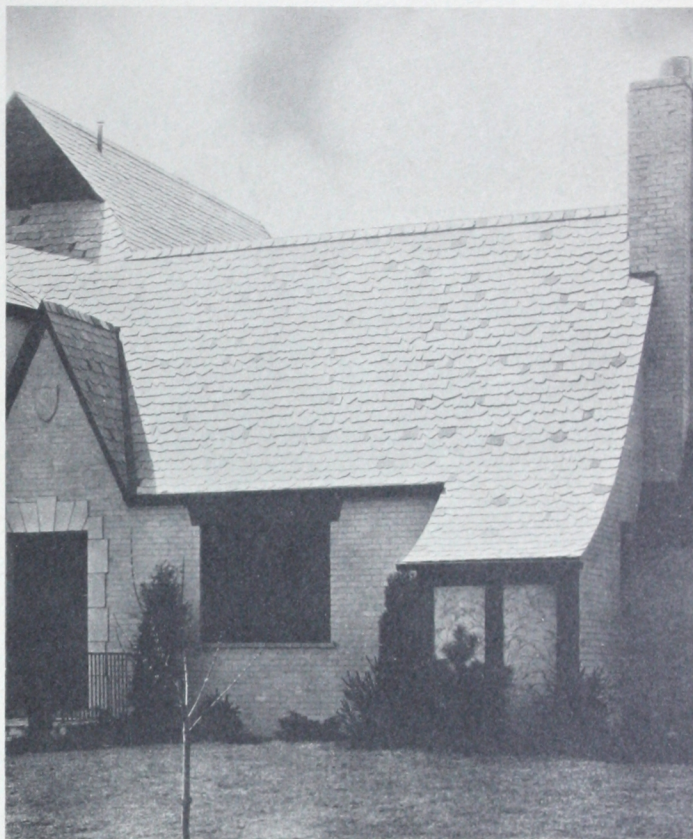

An excellent close-up of 9" x 18" quarter-inch Ambler Asbestos Shingles in mixed colors, laid American method, with butts slightly chipped to provide attractive roof lines

OF HISTORIC INTEREST

The Coolidge homestead in Plymouth, Vt., where the former President took his oath of office, was reroofed with 8' x 16' American Method Ambler Asbestos Shingles not long before Col. John Coolidge's death

FRENCH ARCHITECTURE

Model Home in St. Louis, Mo., roofed with random width broken butt, "Standard Thatch" Ambler Asbestos Shingles; a distinctive roof treatment which adds to the beauty of the house

Here is an Ambler home of the inexpensive type—Honeycomb shingles on the roof, American method Shingles on the side walls, and Ambler Linabestos, a fireproof wallboard, on the dormer and upper side

Economy and comfort are combined with protection on the roof of this charming Dutch Colonial home. These are Honeycomb Ambler Asbestos Shingles, not expensive, but high in quality

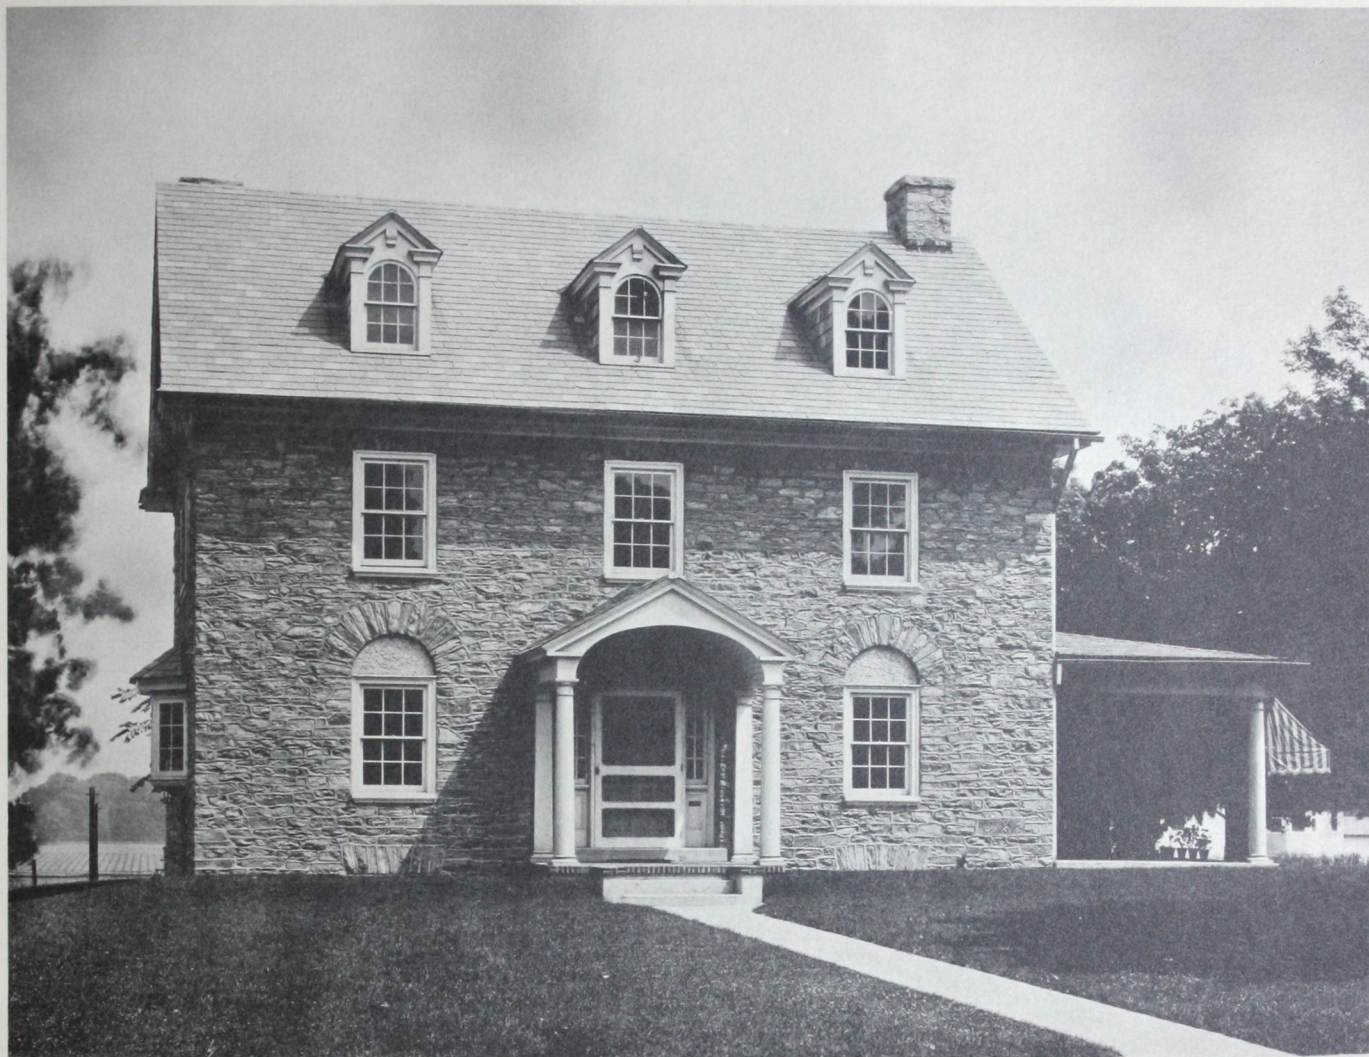

One of a group of Ambler-roofed suburban homes in Battery Park, Md. Whether small or large, a house is better if it has this fireproof, attractive, long-life roof. The above are quarter-inch shingles with random widths

A conservative type of home with a conservative roof fitting the architecture. These 9" x 18" Ambler Asbestos Shingles are on a Lima, Ohio, house

A mixed color roof of 9' x 18" Pearl Gray, Brown, Black, Indian Red and Tuscan Red on a home of a city official in Dormont, Pa., near Pittsburgh. The roof adds color to the home

These are 9" x 18" Ambler Asbestos Shingles on a well-built Pennsylvania Colonial home—a fitting roof to cover a sturdy structure

Here are Pearl Gray Tapered Colonial Ambler Asbestos Shingles on a house in Lexington, Kentucky; a delightful home, ably protected

These also are Tapered Colonial— $\frac{1}{2}$ -inch thick at the butt, casting deep shadow lines. This is a popular type of suburban home near Philadelphia

An increasingly popular type of roof is shown above: 9" x 18", American Method Ambler Asbestos Shingles, with irregular butts
